

OAK

TWIN HERRINGBONE FLOOR

14 & 22 MM

Oak is a hardwood species characterised by being hardwearing and therefore very suitable for flooring. The wood has a warm and golden glow with an interesting grain structure. Over time the natural ageing gives the wood an authentic appearance.

Junckers solid hardwood flooring is produced and categorized in accordance with EN 13629, EN 14342 and Junckers own factory standard.

The floors are made exclusively from solid hardwood and the photographs illustrate the colour, knots and structural graining variation characteristic for the specific wood species and grade.

Each photograph shows the average appearance of the grade. It is normal to see a variation in appearance between individual boards, staves and floors produced and installed at differing times.

Up to 5% of the staves may contain features of the next style. Hardwood floors may fade and change colour over time, especially when exposed directly to sunlight.

TECHNICAL INFORMATION

THICKNESS x WIDTH: 14 & 22 x 129 MM

OAK HARMONY

This grade has a natural look with more colour and structural graining variation between the individual staves. Medium sized knots and hairline splits occur to some degree. Sapwood occurs. Knots and other irregularities are factory filled with a one colour filler.

The actual colour on a wooden floor can vary from the colour shown in this style chart. This is due to the fact that colours are very difficult to reproduce online and in printed material. Junckers accepts no liability to discrepancies and we always recommend ordering a physical sample before placing an order.
